SUMMARY

Backend-focused Full-Stack Developer specializing in **Scalable Distributed Systems** and **Real-time Architectures**. Proficient in building high-concurrency applications using **Spring Boot, Node.js, and Azure Serverless**. Proven track record in implementing complex RBAC systems and AI-integrated workflows. Committed to writing clean, maintainable code for mission-critical API-driven systems.

EDUCATION

Graphic Era Hill University <i>B.Tech in Computer Science and Engineering — CGPA: 7.92</i>	Dehradun, Uttarakhand 2022 – 2026
Gauri Memorial Public Inter College <i>Senior Secondary (UK Board) — Percentage: 79%</i>	Augustmuri, Uttarakhand 2020 – 2022

EXPERIENCE

Salesforce Developer Virtual Experience <i>Agentblazer Champion Program</i>	Remote May 2025 – Jul 2025
- Developed automated business workflows using Salesforce Flow Builder, optimizing task processing efficiency for simulated enterprise environments. - Architected data models and granular permission sets, ensuring 100% compliance with security best practices for cloud-based multi-tenant applications. - Customized Lightning components to enhance user interface responsiveness and declarative logic accuracy.	

PROJECTS

AI-Based Proctoring System <i>Next.js, Spring Boot, FastAPI, WebRTC, YOLOv8</i> [Code]	2026
- Architected a multi-service system for real-time exam monitoring, integrating a Spring Boot backend with a FastAPI-based AI engine for low-latency behavioral analysis. - Implemented STOMP-based WebSocket communication, achieving sub-200ms latency for incident broadcasts and proctor control signals. - Engineered a weighted Risk Scoring Algorithm that automatically triggers session suspension based on AI-detected anomalies, reducing human oversight requirements by 60%. - Designed secure RBAC schemas using Spring Security to maintain data isolation between Student, Proctor, and Admin roles during high-concurrency exam windows.	
IncidentIQ (Incident Management) <i>Azure Functions, Node.js, Socket.IO, MongoDB</i> [Code]	2025
- Developed a backend-heavy incident lifecycle platform featuring automated escalation paths and real-time status synchronization via WebSockets. - Leveraged Azure Functions (Timer-triggers) to automate SLA tracking and retention cleanup, reducing manual administrative overhead by 40%. - Optimized query performance for analytics dashboards by implementing indexed message retrieval and paginated API filtering across 5+ data dimensions.	
NexTalk (Real-time Messaging) <i>Express.js, Socket.IO, JWT, Multer</i> [Code]	2025
- Built a secure messaging core supporting private DMs and group chats with JWT-based authentication and persistent socket connections. - Implemented advanced features including typing indicators, online presence tracking, and room membership validation to ensure a seamless real-time user experience.	

TECHNICAL SKILLS

Core Development: Java, Python, JavaScript, TypeScript, C++, SQL, RESTful API Design
Infrastructure & Cloud: Azure (Functions, App Service), Docker, GitHub Actions, Linux, Git
Backend Systems: Spring Boot, Node.js, Express.js, WebSockets (STOMP, Socket.IO)
Data & AI: MongoDB, Cosmos DB, SQL, FastAPI, OpenCV, YOLOv8, MediaPipe
Architecture: Microservices, Serverless Workflows, RBAC, Distributed Systems, Event-Driven Design

CERTIFICATIONS

Microsoft Learn – Azure Fundamentals (AZ-900 Learning Path)
Microsoft Learn – Azure Developer Associate (Functions, Cosmos DB, App Service)
Microsoft Learn – Azure AI Fundamentals (AI-900 Learning Path)
